

Policy Statement Energy

As ForFarmers we are focused on sustainability as one of our core values. In this we care about the environment and we are committed to protecting it. We care about energy performance, energy use and we are committed to the use of renewable energy and energy efficiency.

We aim to purchase energy efficient products and services that impact energy performance wherever practicable, reduce greenhouse gas emissions and other environmental impacts.

We support design activities wherever practicable that consider energy performance improvement.

Scope: Energy used by ForFarmers UK during the sale, office support, manufacture, product storage and transport of our total feed solutions.

This is achieved by the following key elements:

MONITOR

We ensure that we monitor and manage our energy performance and energy sources throughout our processes to enable reduction of energy, improve energy efficiency and the procurement and generation of renewable energy. We ensure adequate information is available by provision of training and development for our employees and contractors to achieve the relevant knowledge and experience. We document and communicate our procedures and implement a regular programme of energy audits.

COMPLIANCE

We are compliant with applicable legal requirements and other requirements related to energy efficiency, energy use, energy consumption and the requirements of our energy accreditation standards.

CONTINUOUS IMPROVEMENT

We strive towards continuous improvement of all processes relating to energy performance, the use of renewable energy and our energy management system, by providing a framework for setting and reviewing objectives and energy targets and by committing organisational resources to achieve the objectives and energy targets.

The Policy will be periodically reviewed and updated as necessary.

The continued success of this policy requires total commitment from everyone within our organisation and all our stakeholders.
