

Mash Pro 30™

Mash Pro 30™ provides an excellent feed for ruminants and contains a valuable source of high quality by-pass protein.

- This moist, high protein and high digestible fibre co-product makes an ideal forage extender to compliment total and partial mixed rations.

Mash Pro 30™

Key Features Key Advantages

Enhances palatability

Mash Pro 30™ is a natural moist co-product from the manufacture of beer. Mash Pro 30™ is principally comprised of the non-starch parts of barley grains, which have undergone a cooking stage as part of the brewing process, which greatly enhances the palatability of the product and improves the true digestible protein.

Drives intakes

Total and partial mixed rations are enhanced as Mash Pro 30™ ensures the ration stays thoroughly mixed and reduces the ability for the cattle to sort dry ingredients out. Mash Pro 30™ has a finer texture than traditional brewers grains as the barley is ground to a finer grist at the start of the brewing process, making it perfect to use in a variety of rations and reduce sorting.

Highly digestible

Mash Pro 30™ provides low acid loading and is high in digestible fibre. Its low starch and sugar makes it a safe feed for almost all feeding systems.

Reduce ration costs

With a protein level of 30%, Mash Pro 30™ is an excellent cost effective source of rumen degradable protein, true digestible protein and energy and can complement low protein forages & feeds.

Typical Nutrient Value (DM basis)

Dry Matter 25%, Crude Protein 30%, Oil 10.0%, Starch 4%, NDF 62.5%, Ash 4.1%, Copper 15.5mg/kg, MER 12 MJ/kg, DM & MELK (energy) 818 /kg DM.

Feeding Guide

Introduce gradually over 7-14 days ensuring that sufficient long fibre is present in the diet. One of our fully qualified nutritionists will happily assist you in getting the most out of Mash Pro 30™.

Dairy	up to 15 kg/head/day	Available in bulk:
Beef	up to 15 kg/head/day	28 tonne artic loads
Sheep	not recommended, as Copper slightly raised at 15.5 mg/kg DM.	20 tonne rigid loads
